RE: TIMING OF TANK REMOVALS AND REPORTING OF UNAUTHORIZED RELEASES

2200 PACIFIC HIGHWAY, SAN DIEGO, CA 92101

Dear Mr. Hardacre:

On December 9, 1985, a total of four hazardous substance underground storage tanks were removed at the above referenced site. At that time our field inspector issued an Official Notice of an Unauthorized Release.

The report prepared by Woodward Clyde Consultants, dated December 19, 1985 described the existing condition at these locations.

During our meeting on April 15, 1986, you informed us that fourteen (14) additional tanks would be removed with tank removals beginning in June. We understand there is a potential of additional leaking tanks and the possibility of overlapping contamination from various tank locations. Therefore, we understand that site characterization and mitigation activities would be more effectively evaluated when it is known what tanks and/or piping had leaked. Since our department will be represented during these tank removals, we will allow the 5-day reporting requirements as stated in the following to be reported after the final tank has been removed. This is under the assumption that the last tank will be removed prior to August 1, 1986. If the removals are delayed past the August 1, 1986 date, this department must be updated on the status of the unauthorized releases on the site.

Within five (5) working days after the last hazardous substance surface storage tank has been removed, and no later than August 5, 1986, the tank owner/operator or his agent must submit a written Unauthorized Release Report to the Department of Health Services. This report shall include all of the following information that is known at the time of filing the report:

- a) Fill out the enclosed State form. A form should be filled out for each tank that had an unauthorized release. Distribute copies as directed on the back of the form. Please call this office at 236-2222 if you need additional state forms.
- b) List of type, quantity, and concentration of hazardous substance released.

- c) The extent of the soil or groundwater or surface water contamination due to the release based on the results of all investigation completed at the time the report is submitted.
- d) Method of clean-up implemented to date and proposed clean-up actions.
- e) Method and location of disposal of the released hazardous substance and any contaminated soil or groundwater or surface water.

Please send copies of all correspondence to John Hinton with the Department of Health Services located at 107 South Broadway, Room 7011, Los Angeles, CA 90012, and to Scott Hugenberger with the Regional Water Quality Control Board, (RWQCB) at 6154 Mission Gorge Road, Suite 205, San Diego, CA 92120.

Subsequent mitigation actions will be discussed upon review of the submitted report with both the State Department of Health Services and the RWQCB.

Should you have any questions regarding this Official Notice, please call me at 235-2222.

Sincerely,

Keen M. Heato
